AFS 200 D

Structural Walling System

D = Double Reinforcement

200 mm Wall Thickness

“ The two reinforcement layers of **AFS 200D** and large stud openings provide the engineer with a greater choice when using AFS walling for heavily loaded structural elements ... ”

AFS LOGICWALL™
Structural Walling System
Giving builders the edge™ 

The **AFS 200D** is a further expansion of the **AFS LOGICWALL** range to offer structural engineering firms an even greater capacity and design flexibility in the application of AFS walls.

AFS 200D

“ ... The two reinforcement layers of **AFS 200D** and large stud openings provide the engineer with a greater choice when using AFS walling for heavily loaded structural elements such as deep beams, columns, shear and core walls while utilizing the benefits of the product namely speed and the reduction of formed surfaces.

The AFS wall system in general, is greatly advantageous to builders due to the shop drawn modular system and speed of construction without labour intensive formworks and produces high quality finishes.

We recommend the wall system is of great advantage compared to conventional concrete walls for multi storey commercial and residential buildings, hotels, motels, office and shopping complexes and hospitals. ”

TESTIMONIAL FROM SENIOR STRUCTURAL ENGINEER

AFS LOGICWALL is all about ...

- Speed of construction
- Shop-drawn modular system
- Superior structural capacity
- Complies with BCA fire and acoustic performance requirements
- Optimum efficiency in materials handling, not crane dependent
- Durable, quality wall finish

Applications

- Deep beams
- Lift and stair cores
- Shear walls
- Boundary walls
- Blade walls
- Transfer walls
- Core walls
- Retaining walls
- Columns
